Avaya

# Table Of Contents

1

## UX Design

Chatbot redesign for  
internal system

2

## IVR Tuning

Tuning IVR systems for  
better usability

3

## Conclusion

Elaborate on what you  
want to discuss.

1

# UX Design

Internal Service Chatbot Redesign

# Chatbot Redesign

Avaya had an internal chatbot for customers. The old design had the following issues:

- Redundant use cases
- Outdated use cases that provide inaccurate product information

There were new use cases that also had to be included in the chatbot

# UX Design Process

## Analyzed current design

Review current chatbot's use cases and discussed with stakeholders on what needs to be kept

## Use Case Creation

Replicated and created new use cases for Global Services Chatbot

## Review Use Case Designs

Reviewed use case design with supervisor to determine next steps

# Design Timeline

## Stakeholder Discussion

Discussed with stakeholders on which use cases to keep

## Compare Use Cases

Compare Avaya Cloud Services and my bot for any similarities and replicated use cases

## Created new use cases

Created new use cases based on stakeholder requirements. Created conversation paths, options, etc

## Review use cases

Collaborate with manager to review use cases

# Generative AI

Worked to figure out how to integrate Avaya's generative AI with current GSS chatbot for use cases that couldn't be covered.

2

# IVR Tuning

Analyzing transcripts of data and finding which words were recognized by the IVR system

# What is it?

Avaya had worked with many clients across many industries. I helped by checking systems by checking transcripts. In some cases, I provided recommendations for grammar/usability improvements

# Projects

## Airlines

Analyzed transcripts for crew and passengers and provided usability recommendations for grammar recognition. Found system misidentified different utterances that weren't present

## International Utilities

### Company

Tested French and English street names to understand recognition rate. Found an increased pass rate after testing

**My time at Avaya  
taught me how to work  
with different clients  
with different needs.  
Overall, I'm thankful for  
my time.**

# Thank you!

Thank you for your time!
